About me

I am a **full-stack developer** and **software architect**, strongly focused on **high-efficient** web applications. I am successfully combining my **knowledge from different specialities**. Also, I love **good codebase**, so I am always trying to highly improve developer experience by **automating work** - it's much faster and makes people **happy**, as they may focus on more exciting stuff.

10+ years of experience

50+ big projects

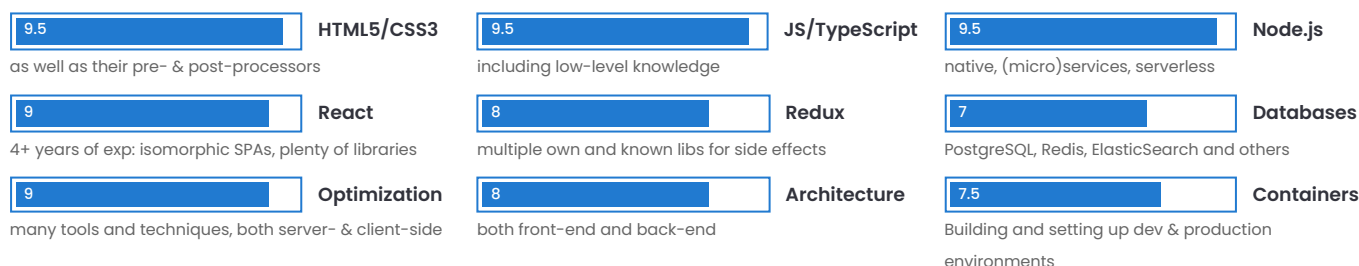

30+ workshops prepared

200+ people interviewed

Technologies & skills

I've been working with many technologies, methodologies and techniques, both on front-end and back-end side. I've got big experience with server-rendered front-end applications as well. I was responsible for building and advising on **all stages and layers** of IT systems, including both **front-end and back-end architecture**. I've got also 6+ years of experience on (mostly technical) **leading** positions.

I am a **fast-learner**. I am trying to understand how technologies work on **low-level**, so learning a new one is much simpler. There is a lot of similarities, which make everything simpler to learn, when you are able to **find patterns**.

Selected experience

During my career I have been working on hundreds of projects, either own, multiple projects for companies during longer cooperation, or making single projects. I've been working on open source software as well. Also, I made many public and closed workshops and talks.

Frontend Developer & Lead @ Evident ID 09.2019 to 04.2022 Preparing architecture, building and maintaining several front-end applications with Vue and TypeScript.	Sockety - fast protocol over TCP First release: 12.2022 Lightweight protocol with performance in mind, with Golang and Node.js implementation.
Senior Front-end Developer & Technical Lead @ Talixo 03.2018 to 02.2019 I was responsible for migrating front-end into a new architecture, as well as improving and creating some services in back-end.	Senior Software Developer & Technical Lead @ G2A 01.2017 to 10.2017 Designing and implementing new systems behind, as well as isomorphic SPAs (with high traffic).
Node.js behind: V8 & its optimizations @ Code Europe 04.2017 · 200+ persons I prepared a presentation about JavaScript performance on front-end and back-end, mostly basing on the V8 engine.	Senior Front-end Developer & Tech Lead @ Grand Parade 06.2015 to 09.2016 Focused on high efficient apps: optimizing performance, preparing architectures, leading and coding projects.
